IT-CONSULTING GMBH

We consult you in your everyday needs concerning IT

What we offer

Software Consultancy
How do you save money?

In most companies all business processes are supported through software which should easily adapt to your flexible process. Based on our expertise and experiences, we support and consult companies in

- **decreasing project risks,**
- **reducing maintenance work and**
- **cuts down licence- and development costs.**

In efficient platforms, frameworks and with secure modern code you will be able to implement new requirements in time and with quality

Software Modernization
How do you modernize your systems?

Companies have to think about ways to future-proof their software. Outdated software structure hinders software updates for customers and employees. We will help you with modernizing your software by

- **analysing the software- and application structure,**
- **improving the source code to state-of-the-art techniques,**
- **migrating or refactoring the software to modern versions.**

With clean software, companies can respond easier to changes in the fast

moving business world.

Software Maintenance (automatic)
How can you save time in maintaining?

To manually maintain software means to assign valuable developer hours in cleanup work. Neglecting maintenance can slow down systems or even become a security risk. Splendit will help you with

- **replacing outdated language constructs with modern alternatives**
- **making the code more apprehensive and understandable**
- **harvesting the fruits of the modern language constructs.**

Ongoing software maintenance ensures that the quality of the source code remains high and the operational costs can be reduced.

jSparrow transforms code automatically
Making it easier to maintain softwares

- **Increase your software or application quality**
- **Reduce your technical costs**
- **Boost workers' productivity**

Splendit
IT Consultation
Why should you choose us?

We work on efficient solutions together with our customers. Our consultants master legacy languages: Cobol, PL∕1, Assembler, Java and various frameworks.

Due to our experience with legacy systems, our team quickly familiarizes itself with existing software systems and implements changes and improvements.

After project completion, we offer maintenance and ongoing support upon customer request.

Old structures need optimization

- therefore, we aim to modernize old technologies.
Our software experts are always working on solving the challenges of our customers and helping them to successfully fulfill their project goals in time.
